## Experiment no:7

Configuration of hybrid topologies using packet tracer

### **AIM:**

To establish of hybrid topologies using packet tracer

### **REQUIREMENTS:**

1. End device - They are the devices through which we can pass message from one device to another and they are interconnected.
2. Switch/Hub - Interface Between two devices.
3. Cable - Used to connect two devices.

### **Procedure:**

**STEP 1:** Click on end devices, select generic Pc's drag and drop it on the window.

Click on SWITCH drag and drop it on the window.

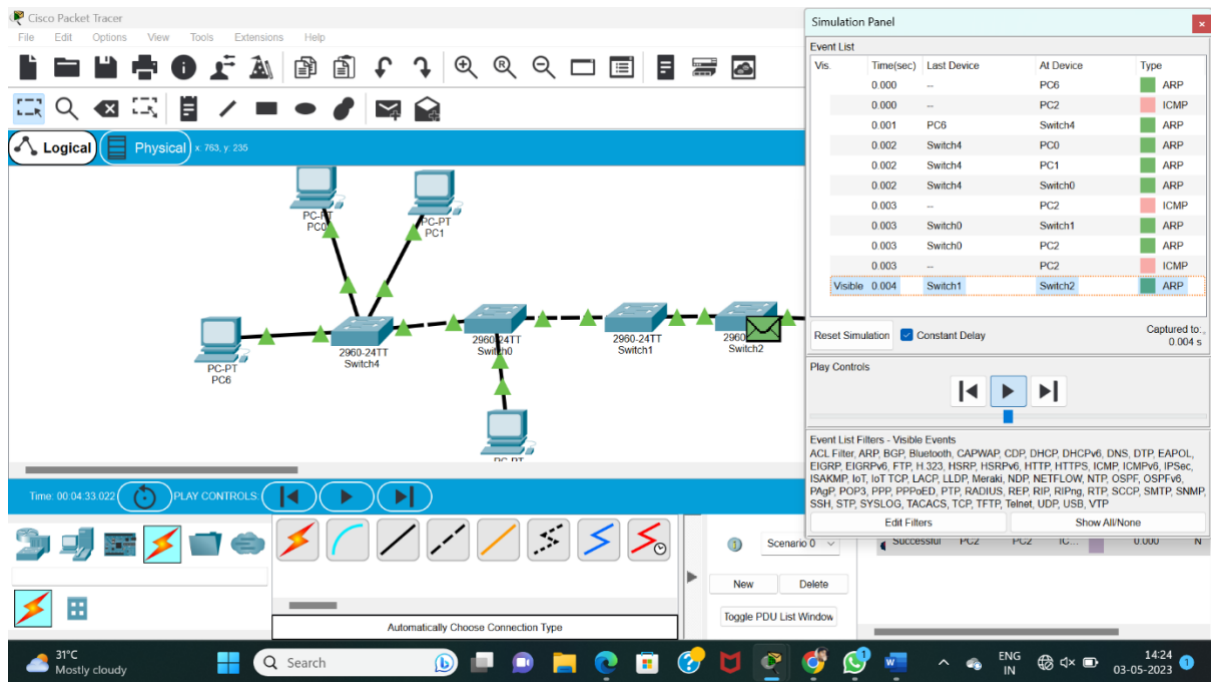

**STEP 2:** Select the straight through cable and connect all end device to switch. Assign the IP address for all end devices. (Double click the end deviceSelect → desktop → IP configuration static)

**STEP 3:** Now set the IP address to Host A (192.168.1.1) in static mode. Similarly set IP addressfor Host B (192.168.1.2) and Host C (192.168.1.3)

**STEP 4:** To view the IP address, give ipconfig command in command prompt. Using ping command, we can establish communication between two host devices.

**STEP 5:** Now display the packet transmission in simulation mode.

### **Hybird topologies:**

**Result:**

Configuration of Network hybrid topologies using packet tracer verified successfully.
